

Vehicle Mounted Towers

- Radio Remotes
- Testing
- Amateur Radio
- Disaster Recovery
- Mobile Demos
- Site Selection
- Emergency Management
- Data Transfer

Aluma Towers has developed a unique vehicle mounted aluminum telescopic tower to be installed by the customer on their van or other suitable vehicle. Towers, available to 100 feet, are transported in a horizon-

tal position, and when at the selected site, they are easily tilted to their vertical position and erected to the desired height. The feature that makes these towers different from Aluma's standard tower line is the unique sliding track design which allows the tower to be centered front to back over the vehicle and enables the operator to move the tower from the horizontal to the vertical position with a minimum amount of effort. Ideal for portable communications, evaluation, temporary cell site, or any application where the customer is required to raise an antenna or instrument.

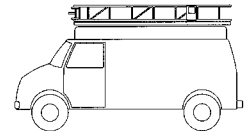

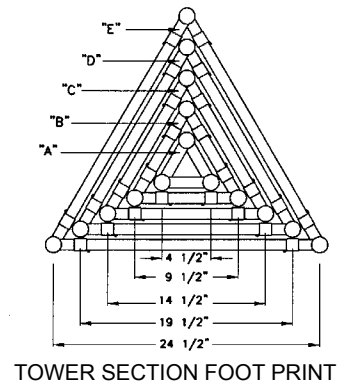

16 ft to 100 ft Towers for Mounting on Your Vehicle

For Use on Full Size Vans

Model	Tower Height w/ mast	No./Length of Sections	Tower Sections	Approx. Weight Tower	Approx. Weight Unit
Standard Duty Crank-up
